## **Getting Started with BlueJ**

TOTAL POINTS 3		
1.	Suppose you have written a Java program that has one class and one method.	1/1 point
	Which one of the following best describes what you need to do in order to run the program?	
	<ul> <li>Create a new object for the class, call the method, and then compile the program.</li> </ul>	
	<ul> <li>Create a new object for the class, compile the program, and call the method.</li> </ul>	
	Compile the program, create a new object for the class, and call the method.	
	<ul> <li>Compile the program, call the method, and then create a new object for the class.</li> </ul>	
	✓ Correct	
2.	Which one of the following best describes how one knows in BlueJ that a class has compiled successfully?	1/1 point
	The program automatically runs to indicate compilation success.	
	<ul> <li>An object is automatically created to indicate compilation success.</li> </ul>	
	<ul> <li>The class icon turns the color red to indicate compilation success.</li> </ul>	
	The class icon removes the shaded diagonal lines to indicate compilation success.	
	✓ Correct	
3.	Which one of the following best describes BlueJ?	1/1 point
	BlueJ is a programming environment.	
	BlueJ is a word processor for editing code.	
	BlueJ is software that organizes data files.	
	BlueJ is an object-oriented programming language.	
	✓ Correct
